Introduction to R and Data Analysis(Phase II):
R and Data Mining introduces researchers, post-graduate students, and analysts to data mining using R, a free software environment for statistical computing and graphics. It provides practical methods for using R in applications from academia to industry to extract knowledge from vast amounts of data. Use of R in tasks such as classification and prediction, clustering, outlier detection, association rules, sequence analysis, text mining, social network analysis, sentiment analysis, and more. Data mining techniques are growing in popularity in a broad range of areas, from banking to insurance, retail, telecom, medicine, research, and government. This Course focuses on the modeling phase of the data mining process, also addressing data exploration and model evaluation. Features case studies in real-world applications to help readers apply the techniques in their work.
